DATASHEET

Secure, Integrated, Fast, and Easy Content Management Platform: FileOrbis

Solutions Provided

01

Solve your content access need without VPN

02

Solve your content sharing problem over uncontrolled, cloud-based environments. Support HTTP(S)-FTP(S)-SFTP protocols

03

Solve access and permission management problems. Define user and group-based private access **policies**

04

Solve your access reporting and log problems in all content environments

05

Solve the problem of failing to send emails with large attachments and preserve capacity on email servers

06

Enable approval flows while sharing files

07

Consolidate all your file environments in a single platform, to ensure a certain standard

08

Meet your classification needs via automatic and user-driven classification

09

Eliminate shares with everyone and USBs. Define public workplaces

10

Ensure that security policies are applied to any file users upload, download or preview on the platform

AT-A-GLANCE

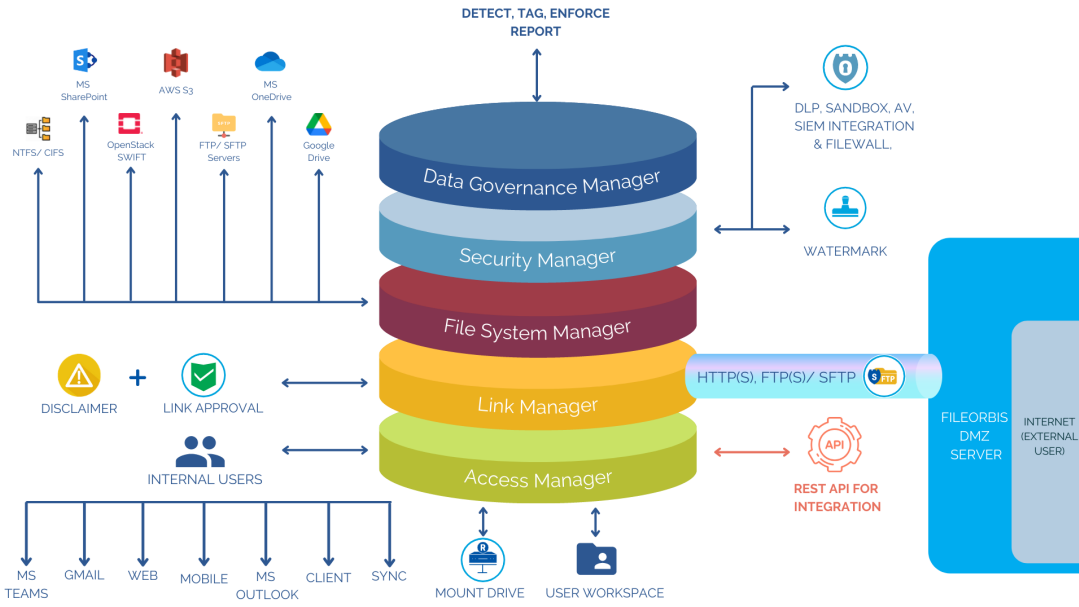
WHAT IS FILEORBIS?

FileOrbis is an **on-premise / on-cloud** content management system equipped with unique operation and control features allowing you to:

- **Enforce security** scans and **controls** on your files
- **Conduct content** and sensitive **data analysis** on your files,
- **Share** your files with internal and external users,
- **Manage** permissions and **access** for your files,
- **Access** your files from **everywhere**

FileOrbis is a consolidating platform that can manage file servers, user profile folders, user-specific areas, and network disks. With FileOrbis, you both create an access channel for all your file systems and have an integrated management system.

FileOrbis does not consider content management only through one perspective such as access, authorization management, file sharing, logging, etc. but helps enterprises at any point related to content management. By integrating with security and content analysis solutions like antivirus, sandbox, DLP, etc. FileOrbis enables you to run all file environments together and/or in series and more effectively.



WHY FILEORBIS?

- **Customer and business outcome-focused**

FileOrbis is actively seeking ways of helping users and businesses ensuring during digital transformation. To help better, FileOrbis always listens to the customers and tries to understand their needs as a primary responsibility to their existing and potential customers. As a result of this effort; more than %60 of our customers either increase their existing licenses or add new add-ons.

- **High experience in different sectors**

FileOrbis bring extensive control on content flow. Today, almost every enterprise from different sectors needs to work with different types of data from financial to health data. Therefore, every enterprise needs a certain level of control on all the data they work on and, more importantly, on the data they share with 3.parties.

- **Fast time to value**

FileOrbis can be up-and-running within days; you don't need to spend time and effort for a long time to get an outcome. To get an outcome from most of the digital transformation projects, you may need to spend a huge effort for a long time.

- **Single platform meeting all file management and share needs**

It is very common for enterprises to have different solutions for different needs, even for different business units. This stems from the fact that most of the solutions concentrate on a part of content flow. FileOrbis handles content flow as a whole and provides all of the components needs at different stages of content flow.

- **Extensive integration options**

Integration both brings operational efficiency and helps enterprises to get more than what solutions can provide when they stay standalone. The importance of such integration is very well taken by FileOrbis and at every stage of software development and software deployments at customers, integration opportunities are eagerly sought.

- **Agile solution**

FileOrbis is developed on the most commonly used and capable software development environments mostly based on micro-services. This structure makes FileOrbis highly agile and adaptable. Using API services ensures high integration capabilities and ease of support for new technologies within FileOrbis.

About FileOrbis

FileOrbis is a product family aiming to manage the user and content relationship within an institutional framework. FileOrbis is constantly being developed to meet the different needs of customers and industries in terms of content management. FileOrbis focuses on high security, wide integration options, ease of use, and granular management.

WHAT DOES FILEORBIS PROVIDE?

FileOrbis is a platform that allows you to access and manage your existing file environments more securely, quickly, and easily. It consolidates all the file environments, that your users access, onto a single screen and provides easy file access to the users through this consolidated structure.
It facilitates your users' file operations, internal and external sharing. While your users have a practical and secure workplace, it increases the manageability of your file environments, helps you define special access permissions for users, and receives detailed reports and analysis; also helps you save on efforts for end users' IT needs.

- Various licensing options are available for all needs and preferences
- Licensing is calculated based on user quantity
- Perpetual license or Subscription license are both available
- Crosses are not included in suites
- **OPTIONAL** can also be added to suites

LICENSE PACKAGES

Secure Link Suite:

Users can manage their own file areas, share via link, and also perform file-sharing operations more securely after FileOrbis is integrated into existing security solutions (DLP, Antivirus, Sandbox, etc.) within the organization.

Secure File Server Suite:

While users manage their own domains and share via link, they can view and manage their files in File Server Common Network Folders that are mapped to FileOrbis. Also, after FileOrbis is integrated into existing security solutions within the organization (DLP, Antivirus, Sandbox, etc.), they can perform their file-sharing operations more securely.

Advanced Suite:

It is a package that includes all the features of the specified suite packages and 4 add-on modules (Watermark, FTP / SFTP, Mount Drive, and Approval). These 4 additional modules can be added as an option to any of the packages mentioned above.

Data Governance Manager:

It provides sensitive data analysis on unstructured data (file and document) associated with the FileOrbis platform. (TCKN, Credit Card Number is the default)
