

Solutions Provided

• It resolves your cloud-based unchecked file sharing problems. It supports HTTP (S) – FTP (S) – SFTP protocols.

• Solve your external file access and VPN management problems.

• Solve the problem of failing to send e-mail attachments and e-mail servers' running out of space due to attachments.

• Solve your access reporting and log problems in all file environments.

• Eliminate the permission complexity and unused files on file servers.

• Solve access and permission management problems. Generate user and user group based special access policies.

• Eliminate the need for spaces where everyone can read & write and USB usage. Create public workspaces.

• Contribute to your legal requirements such as KVKK and ISO 27001. Provide sensitive data analysis and aging in all areas.

Secure, Integrated, Fast and Easy File Management Platform: FileOrbis

At a Glance

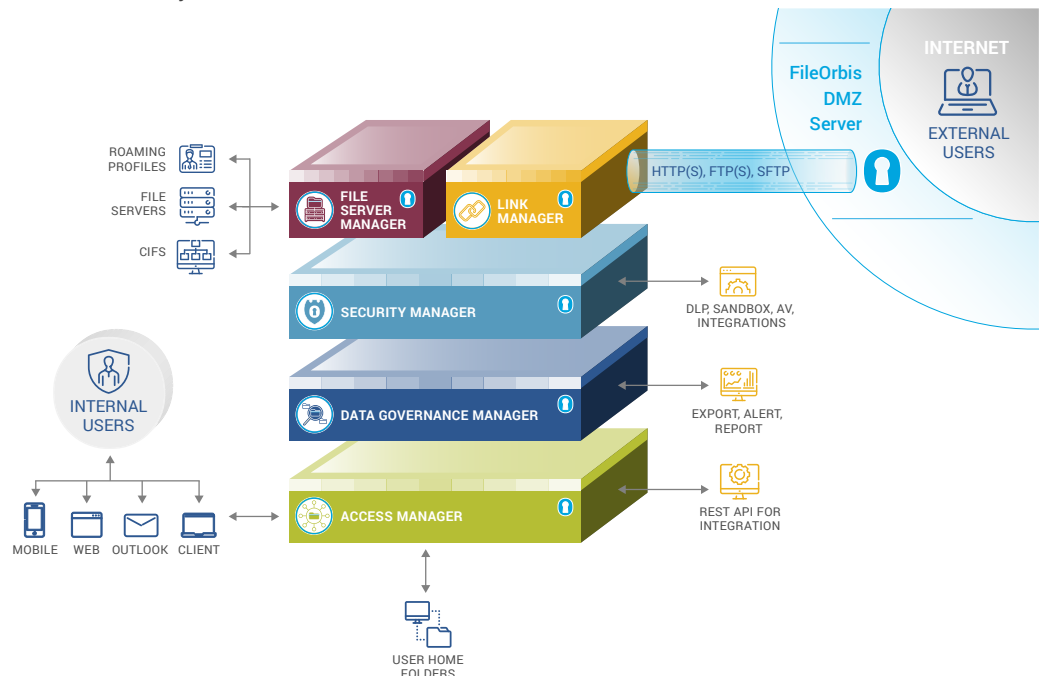

What is FileOrbis?

FileOrbis is an on-premise file management system allowing you to:

- Access your files from everywhere,
- Manage authorizations and access to your files,
- Share your files with internal and external users,
- Include your files in security analyzes and processes,
- Conduct content and sensitive data analysis on your files, and it is equipped with unique operation and control features.

FileOrbis is a consolidating platform which can manage file servers, user profile files, user-specific areas and network disks. With FileOrbis, you both create an access channel for all your file systems and have an integrated management system.

FileOrbis does not consider file management only through one perspective such as access, authorization management, file sharing, logging etc. Adding security and content analysis products (zero-day, anti-malware, DLP, sandbox etc.) to these administrative features, FileOrbis enables you to run all file management systems together and/or sequentially and more effectively.

What does FileOrbis provide?

FileOrbis is a platform that allows you to manage your existing file system more securely, quickly and easily. It consolidates all the file environments, that your users access, onto a single screen and provides easy file access to the users through this consolidated structure.

It facilitates your users' file operations, internal and external sharing. While your users have a practical and secure work environment, it increases the manageability of your file environments, helps you define special access permissions for users, and receive detailed reports and analysis; also helps you save on efforts for your end users' IT needs.

How it Works?

FileOrbis works integrated with many systems to intelligently manage files. You can imagine FileOrbis as an IT structure that can help you to improve data management standards. FileOrbis manages your file systems, NTFS permissions, your mobile/web accesses; Integrates with DLP, AV, SMTP, Active Directory within your network including DMZ. It can meet your requirements for FTP(S), SFTP and VPN services used for file access.

FileOrbis can be quite easily installed in your environment as an on-premise solution. It manages your network disks, user profile files and user files by synchronizing NTFS permissions after integrating with DMZ and domain in accordance with your network.

It integrates with AD and OpenLDAP, automatically recognizes all users and user groups, does not require new user to be created. You can easily run a demo in your own environment.

FileOrbis Suites

LINK SUITE:  Access Manager + Link Manager	FILE SERVER SUITE:  Access Manager + Link Manager + File Server Manager
SECURE LINK SUITE:  Access Manager + Link Manager + Security Manager	SECURE FILE SERVER SUITE:  Access Manager + Link Manager + File Server Manager + Security Manager
ADVANCED SUITE:  Access Manager + Link Manager + File Server Manager + Security Manager + Approval + Mount-Drive + Watermark / Isolation + FTP/SFTP	DATA GOVERNANCE SUITE:  Access Manager + Link Manager + File Server Manager + Security Manager + Data Governance Manager

FileOrbis Core Functions

 ACCESS MANAGER Allows users to manage their own file folders and use them as they wish. There is no sharing.	 LINK MANAGER Allows users to share documents as links without any file size limit.	 FILE SERVER MANAGER Allows users the ability to manage existing file servers remotely to access files. It enables them to easily share these files.	 SECURITY MANAGER Allows integration of the security products of the organization and ensures that these shares pass through security scanning, while users share internally and externally.	 DATA GOVERNANCE MANAGER Allows sensitive data analysis on unstructured data associated with the FileOrbis platform. It allows the user to assign tags to documents and files automatically and manually, and to apply rules according to these tags.

FileOrbis Add-ons

 APPROVAL Allows the link to be active after it is approved by assigned managers/administrator.	 MOUNT DRIVE Allows FileOrbis to be accessed as a disc without web access.	 WATERMARK / ISOLATION Allows organization to put a watermark on the shared files that including some audit information.	 FTP / SFTP Allows the use of FTP / FTPS and SFTP, which are commonly used protocols for sharing at application level.	 ISOLATION Allows users to edit / view MS Office files without downloading them by enforcing working on documents only within an isolated application that allows one-time access, without leaking data by using methods like copying to clipboard.
